

1. To run install, type `npm install` in terminal. Make sure you are in integrated terminal.
2. To run type, `node index.js` and the mongodb will connect
3. I have decided to make html designs regarding front end which will make the project more User friendly

I have made a function that can statically add projects , artworks and you can pass in the json data to the array when you hit `/upload-static-data` route from the browser, it will be uploaded to DB.
